November 4 - 8, 2019

Portland, ME

Join leaders from across New England and the Maritime Provinces for an unprecedented event that brings together environmental, economic, social, and institutional perspectives on coastal climate resilience.

## Gulf of Maine 2050 International Symposium

**Who Should Attend:** Scientists; natural resource managers; municipal planners; community and tribal leaders; individuals working in a variety of marine trades including transportation, seafood, energy, and tourism; NGO staff; students; and philanthropists.

**About the Symposium:** Gulf of Maine 2050 will kick off with special keynotes that set the global and local context for a week of inspiring information sharing and collaboration. Plenaries on subsequent mornings will feature scientific experts and practitioners to unpack the local implications of the next 30 years of warming waters, rising seas, and ocean acidification. Daily rounds of energetic and provocative “lightning” presentations will bring into sharp focus the challenges and/or adaptation solutions already emerging within various sectors. Afternoon collaborative work sessions will allow participants to dive deep into shared priorities and develop strategies to mitigate risks and maximize opportunities. Poster sessions will provide an opportunity to share cutting-edge science.
