

## Ecology's Marine News: "EYES OVER PUGET SOUND"

Surface condition report from July 28, 2014 is now available.

[http://www.ecy.wa.gov/programs/eap/mar\\_wat/surface.html](http://www.ecy.wa.gov/programs/eap/mar_wat/surface.html)

What you will find:

Warmer and sunnier days result in higher than normal river flows from the Skagit and Nisqually. Biological activity in the water column is high. Abundant organic surface debris in Hood Canal, Padilla Bay, and many Inlets. Red-brown blooms in South Sound, Discovery Bay, and regions of Bellingham Bay. Different blooms in Skagit Bay, Padilla Bay, and Sinclair Inlet. Jelly fish are numerous in all southernmost South Sound Bays. Hood Canal remains cold but Puget Sound-wide temperatures are now warmer and less salty. Data from the Victoria Clipper and our sampling in the Strait provides important information on water exchange with the ocean

The pdf document is around 10 MB, upload times may vary.

The pdf document has clickable navigation links.

Source images of the entire flight are located at:

<ftp://ecy.wa.gov/EOPS/>

**Note:** If you wish to have access to images right after the flight please send me an e-mail at [ckre461@ecy.wa.gov](mailto:ckre461@ecy.wa.gov) and I will put you on a pre-release alert list with an ftp link.

We hope the images are inspiring and informative.

With best regards,

Christopher and the Marine Monitoring Unit
