Surface Conditions Report

October 29, 2014

Guest: Gabriela Hannach

Start here

Up-to-date observations of visible water quality conditions in Puget Sound and the Strait of Juan de Fuca

New release:

At the end of summer, water temperatures are still high, and salinities and dissolved oxygen are low in Puget Sound. Both sea surface temperature and upwelling off the coast are high and the Fraser River flow is low. This combination makes it an interesting fall. Very dense and large patches of jellyfish appear in finger inlets of South Sound. Red-brown blooms also remain strong in South Sound.

We created a survey to get your feedback on EOPS, [click here.](#)

The pdf document is around 10 MB, upload times may vary.

The pdf document has clickable navigation links.

Source images of the entire flight are located at:

ftp://www.ecy.wa.gov/eap/Flight_Blog/latest_pictures/September_16_2014/

Note: If you wish to have access to images right after the flight please send me an e-mail at ckre461@ecy.wa.gov and I will put you on a pre-release alert list with an ftp link.

We hope the images are inspiring and informative.

With best regards,

Christopher and the Marine Monitoring Unit
