National Award for Innovation!

Surface Conditions Report, October 6, 2015

[Start here](#)

Up-to-date observations of visible water quality conditions in Puget Sound and the Strait of Juan de Fuca

What you will find:

Puget Sound is starting to normalize in response to fall conditions with cooler air temperatures, rain, and recovering river flows. We are seeing fewer algal blooms, jellyfish, and macro-algae as salinities become more normal. Yet warm waters persist and El Nino and the Blob are likely to affect Puget Sound throughout the winter. The Nisqually River fared better through the drought than other rivers and best management practices have been improving its water quality. EOPS and ferry monitoring gain recognition with a national award for innovation!

We created a survey to get your feedback on EOPS, [click here.](#)

The pdf document is around 10 MB, upload times may vary.

The pdf document has clickable navigation links.

Source images of the entire flight are located at:

ftp://www.ecy.wa.gov/eap/Flight_Blog/latest_pictures/

Note: If you wish to have access to images right after the flight please send me an e-mail at ckre461@ecy.wa.gov and I will put you on a pre-release alert list with an ftp link.

We hope the images are inspiring and informative.

With best regards,

Christopher and the Marine Monitoring Unit
